THE PEPTIDE LOUNGE · EMAIL SETUP

Letting your website send email from thepeptidelounge.co.uk

Adding four records to your IONOS DNS lets the website send order confirmations, dispatch updates and password-reset emails from **thepeptidelounge.co.uk**, so they land in inboxes rather than spam. Your Google Workspace mailbox is not affected.

YOU'LL NEED	TIME	YOUR MAILBOX	AFTERWARDS
Your IONOS login	About 10 minutes	Not affected	Tell us, and we verify them

The four records to add

RECORD	TYPE	HOST NAME	VALUE	PRIORITY
1. Signing key (DKIM) Proves the emails really come from you	TXT	resend._domainkey	p=MIGfMA0GCSqGSIb3DQEBAQUAA4GNADCBiQKBgQCuQTUs9DLSPP5y9Kc47nWuzwOL9L2tM/lDUO5auw77fzMUfZALvqurkO3gLk6+gHCaWB3xE616QlUkOk+/LKbpELofeBBvQ65uW5Vd2W1QeQgBt36VNqg4Q3U26m500R5aY6lNUK7dFE/Jd5lpgWSTmNLNVE8FEoCclSifALKvQwIDAQAB	
2. Bounce handling Receives delivery reports	MX	send	feedback-smtp.eu-west-1.amazonses.com	10
3. Sender permission (SPF) Allows the sending service to send for you	TXT	send	v=spf1 include:amazonses.com ~all	
4. Email policy (DMARC) Monitoring only; never blocks email	TXT	_dmarc	v=DMARC1; p=none;	

None of these records exist yet, so all four are new. Enter the host names exactly as shown: IONOS adds ".thepeptidelounge.co.uk" itself. Leave TTL at the IONOS default.

Copying the long key (record 1): it must be one unbroken line. If copying from this PDF adds spaces or line breaks, remove them, or ask us and we'll email you the value as plain text.

Step by step in IONOS

1. **Log in at ionos.co.uk and open Domains & SSL.**
   Click thepeptidelounge.co.uk, then open the DNS tab.
2. **Add record → TXT (record 1).**
   Host name **resend._domainkey**, value the long key starting **p=MIGf**. Save.
3. **Add record → MX (record 2).**
   Host name **send**, points to **feedback-smtp.eu-west-1.amazonses.com**, priority **10**. Save.
   If IONOS warns this changes your email setup, check the host name reads "send", not "@", then confirm.
4. **Add record → TXT (record 3).**
   Host name **send**, value **v=spf1 include:amazonses.com ~all**. Save.
5. **Add record → TXT (record 4).**
   Host name **_dmarc**, value **v=DMARC1; p=none;**. Save.
6. **Let us know it's done.**
   Email devteam@vebryx.co.uk, and we'll take it from there.

Please leave these records exactly as they are

They run your Google Workspace email. Changing them could stop email from arriving.

- **MX records on "@"** (the main domain), ending in **google.com**.
- **The TXT record v=spf1 include:_spf.google.com ~all on "@".** Don't add a second SPF record on "@": the new one goes on "send" only.
- **TXT records** starting **google-site-verification** or **google-gws-recovery**.

There is no DMARC record today. If IONOS shows one already exists, don't add a second: tell us instead.

What happens next

01
We verify the records
We check them in Resend, our email service. Usually minutes, occasionally a few hours.

02
We send a test
We switch on the website's emails and send you a test from thepeptidelounge.co.uk.

03
Nothing is blocked
The DMARC policy "p=none" only monitors. It never blocks or rejects any email.

VEBRYX

Done, or stuck on a step?

Send us a screenshot of your DNS page and we'll check the records and guide you.
